# OnyxCeph³™ Online BracketLib

OnyxCeph³™ supports different techniques of indirect bonding workflows by separate modules for virtual planning and transfer of bracket positions. In recent years, virtual brackets needed for this purpose had to be provided by Image Instruments and imported as an individual patch file.

Since Release 3.2.100, each user can access the Onyx Online-BracketLib directly from within the application to download the desired bracket file(s) to have it available for exclusive use in the IDB modules thereafter.

Comprehensive serach and filter options are provided to ease the selection and import process. Currently, more than 3.200 items from 15 suppliers are available for download. This number will be increasing in the near future due to the upload of files already maintained offline. In addition, new product groups provided by the manufacturers on a continuous base are prepared and added to the online bracket library by Image Instruments.
