### Requirements for Customized Analysis

The following information is required to create a customized analysis:

0. Tracing type of the analysis (Lateral Ceph, Pano, Profile Photo, Frontal Foto, ...)
1. Name of the analysis
2. List of all numeric results to be calculated, incl.
  - 2.1 Short name of the result variable
  - 2.2 Long name of the result variable
  - 2.3 Definition for the result variable incl. no. of digits after decimal point
  - 2.4 Clinical norm (if available)<sup>1</sup>
  - 2.5 Standard deviation for the norm (if available)<sup>1</sup>
  - 2.6 Verbal result description for result intervalls (if available)
3. A sketch for the graphical tracing
4. A sketch for the print form

<sup>1</sup> if needed: norms depending on age and gender; also specify ethnical group, if other than caucasian; It is also accepted to refer to an already implemented analysis – however, make sure that results put together from different existing analyses are harmonized (see OnyxCeph<sup>3™</sup> menu item Help |Findings lexicon).

For creating a customized analysis a flat rate of EUR 290 plus VAT (if applicable) is charged one-off. The analysis is delivered as a patch file to be imported via menu item Options|Install Patch.
