

# System Options - Tab |Forms|

On system options tab |Forms|, several settings for DHTML forms can be done. These settings will influence the use and appearance of main window tab [|Forms|](#).

Hauptregister |Formulare| wurde in Version 3.2.169 wegen möglicher Sicherheitslücken, die durch Browser-Skripte entstehen können, entfernt.

The screenshot shows the 'System Options' dialog box with the 'Forms' tab selected. The left sidebar contains a list of categories: Patient Data, Image Types, Sessions, Galleries, Printouts, Forms (highlighted), Display, Interfaces, Third Party Tools, Event, Upload Data, and Email. The main area is titled 'Available Forms' and contains a list of three items: 'Aligner-Eigenwillig', 'example-07\_mit\_js', and 'example-07\_wo\_js'. Each item has a checked checkbox. Above the list are icons for adding, editing, deleting, and moving items. Below the list are four radio button options: 'Medical History', 'Clinical Documentation' (selected), 'Functional Diagnostics', and 'Others'. At the bottom, there is a 'Full Screen' section with a 'Password' label and an empty text field. The dialog box has a close button (X) in the top right corner and 'Help' and 'Close' buttons at the bottom right.

## Panel Available Forms

► *List View*

On main program [\[Forms\]](#), DHTML templates can be displayed, filled out, saved and sent by container. The templates have to be created by the user with an external HTML editor (e.g., DFM2HTML). There are only a few links to database that can be linkd in such templates by field names like basic demographic patient data. All belonging source files have to be zipped and the ZIP archive has to be imported in Systemoptions on subtab [\[Forms\]](#) in one of the available 4 categories.

- Medical History
- Functional Diagnostics
- Clinical Documentation
- Others

► *Buttons*

 Up	Move selected entry one list position up
 Down	Move selected entry one list position doen
 Add	Create New entry
 Edit	Edit selected list entry
 Delete	Delete selected list entry

## Panel Fullscreen

In certain workflows, patients or other person may want to fill out the templates displayed on the main window tab [| Forms |](#) themselves. In order not to allow access to other parts of the main program, the form can be displayed in full screen. A return to the normal user interface requires entering the password set in the panel.
