

Module Treatment Simulation 2D

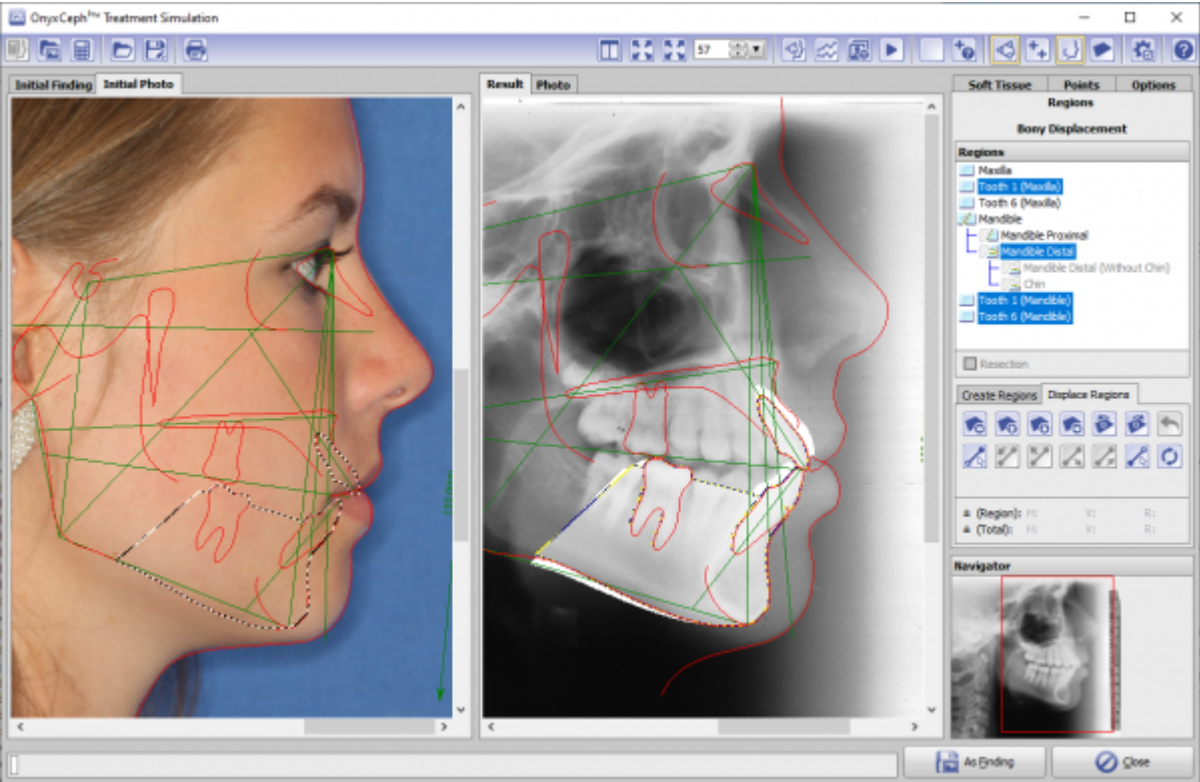

Program version	BASIC	2D PRO	3D PRO	LAB	OMS
Availability	✗	📄	📄	📄	📄

Module Treatment Simulation 2D can be used to simulate orthodontic and/or surgical treatment measures on a lateral ceph image in combination with an associated lateral photo in their effect on cephalometric values and soft tissue profile changes.

First Steps

- 1. Open module with lateral ceph xray and (optionally) a corresponding lateral photo
- 2. Define segments for simulation
- 3. Select method and parameters for soft tissue simulation
- 4. Displace / rotate segments
- 5. Analyze cephalometric changes (graphically, numerically)
- 6. Perform soft tissue simulation: compare before and after
- 7. Save planning as a project
- 8. Save modified images (lateral ceph, lateral photo) as findings

Module user interface
