# Window [Onyx Configuration]

Overview

The configuration manager can be used on any OnyxCeph³ workstation.
You open it by right-clicking the menu button (top left, with protractor) while holding down the Ctrl key. A context menu appears and you select the entry "Configurations".\
All configurations are stored in the database on the server. A separate configuration is stored for each login on each workstation.
The naming convention is: **Login [computer name]**

Templates

- A default configuration can be saved for each computer. This template will be adopted if no configuration for login + workstation exists yet.
    - The naming convention is: **[Computername]**

- In addition, a global default configuration can be stored for the network. This template is taken over:
    1. if no configuration for login + workstation and

---

2. no template for the workstation is found.
   - This template has the fixed name: **[Global_Default]**

Possible Actions

- List / filter configurations and templates
- Edit configurations and templates
- Copy configuration or template from other workstations / logins
- Create templates for other workstations
- Delete configurations and templates
- store default configurations

List / Filter Configurations

In the box "Show configurations" you can select which configurations are listed:

- **Workstation:** *XY* All configurations of the current workstation (XY) are listed.
- **Login:** *Name* All configurations of the current login are listed (also from other computers)
- **All configurations** All workstation configurations available on the server are listed
- **All templates** All templates available on the server are listed

Edit Configurations

The configurations are saved in INI format. If you press the **Edit** button, a small editor opens, which can be used to change these entries.\

Warning
If you change these settings, it is possible that OnyxCeph³ will not work anymore. If this happens, please delete the configuration for the affected login and restart OnyxCeph³

Apply Configuration or Template

With the button **Use** the currently selected configuration will be applied, OnyxCeph³ will be restarted afterwards.

Delete Configurations or Templates

Configurations or templates can be removed from the database by pressing the delete key . If the affected workstation is currently active, the record with the settings will be recreated when OnyxCeph³ is closed.

Define Default Configurations

There are three ways to create default configurations:

1. With the key **As Template** the currently selected configuration is taken over as a template for the workstation.
2. With the key **As template for computer** the currently selected configuration is taken over as

template for any workstation. The name must be entered and is not checked for correctness.

3. With the key **As global template** the currently selected configuration is taken over as global template and stored under the name **[Global_Default]**.
