

Module Combine 2D

Module Combine 2D can combine two images with different but overlapping content. The second image behind the first image is shown completely or in a self-defined region of interest using common reference points with selectable transparency. In addition, the tracing of one of the two images can be overlaid.

First Steps

1. Open module with 2 images
2. Select or digitize corresponding landmarks
3. Define region of interest
4. Switch to tab [Combine]
5. Optionally, modify superimposition
6. Save result as project and/or as finding
